

**Site Restoration/Rehabilitation**

- For temporary disturbance of soils and/or vegetation in waterways, wetlands or riparian areas, please discuss how you will restore the site after construction including any monitoring, if necessary\*

There will be no soil disturbance of soils and or vegetation in waterways, wetlands or riparian areas. A large excavator will be used to dig trenches for concrete abutments and to place bridge on to abutments. The excavator has sufficient reach that entering the wetlands or riparian areas won't be required. The excavator will cross the river in the existing low water ford area just north of the proposed bridge site to access the south side of the river.

**Mitigation**

Describe the reasonably expected adverse effects of the development of this project and how the effects will be mitigated.\*

- For permanent impact to wetlands, complete and attach a Compensatory Wetland Mitigation (CWM) Plan. (See OAR 141-085-0121 to OAR 141-085-0176 for plan requirements)\*
- For permanent impact to waterways or riparian areas, complete and attach a Compensatory Mitigation (CM) plan (See OAR 141-085-0115 for plan requirements)\*
- For permanent impact to estuarine wetlands, you must submit an Estuarine Resource Replacement Plan. (See OAR 141-085-0240 to OAR 141-085-0257 for plan requirements)\*

NA

**Mitigation Location Information** (Fill out only when mitigation is proposed or required)
