

Wharton Proposed Bridge Site

The Proposed Bridge site is very desirable for egress on to the Middle Fork Road, for Scenic Waterway requirements, and for construction purposes on the south side of the river. It is ideal for bridge abutment construction. An old road will be utilized on the south side of the river to the point where a switchback is constructed and the road will turn back to the west. The bridge would be located on the left side of the picture and would span the fringe wetlands area which are present along each edge of the river.
